Application/Control Number: 10/672,452

Art Unit: 2815

Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4 and 6-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Katsu '877.

Katsu teaches a silicon solar cell "photodiode" comprising a silicon substrate 1, a region of second conductivity type 2, a region of first conductivity type 9, a patterned isolation layer 10, and a metal layer 5 contacting region 9 between regions of the patterned isolation layer 10. Claim 1 is accordingly anticipated by Katsu. Note that the label "photodiode" in claim 1 does not structurally distinguish the claim over Katsu which

can be likewise labeled a "photodiode". Claim 2 is rejected as the isolation layer 10 can be a repetitive pattern. See figure 2. Claim 3 is rejected as isolation layer 10 is oxide.

Claim 4 is rejected as nitride is disclosed in col.8 line 16. Claims 6 and 7 are rejected as p or n type substrates are disclosed (column 7 lines 63-64). Claim 8 is rejected as Katsu shows an oxide film 4 and patterned metal contact layer 3 in figure 13.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 and 6-9 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Katsu '877.

Katsu teaches a method of making including photoetching and providing a metal contact. The wafer is processed according to standard solar cell processing technology which typically includes diffusion to form highly doped regions near the surfaces. See column 5. Accordingly claim 9 is considered obvious processing.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Katsu in view of Glenn '068.

From Glenn it would have been obvious to have practiced rectangular aperture contact design for improved strength and support. Claim 5 is obvious structure.

Mauk '463 is relevant art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jerome Jackson Jr. whose telephone number is 571 272 1730. The examiner can normally be reached on t-th 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Thomas can be reached on 571 272 1664. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
